

GP73 Recombination Protein

Basic information:

Catalog No.:	UDP9089-2	Source:	Human
Expression Host:	HEK293	Type:	Recombinant protein
Purity:	> 90 % as determined by SDS-PAGE		

Useful Information:

Construction:

A DNA sequence encoding the GP73 Protein was expressed with His-tag in C terminus.

Molecular Mass:

The protein of GP73 consists of 366 amino acids.

Formulation:

Liquid in PBS, pH7.4

Biological Activity

N/A

Endotoxin:

N/A

Storage:

Recombinant proteins are provided as frozen liquid which are shipped with dry ice. Bulk packages can be provided as lyophilized powder which shipped with blue ice.

Reconstitution:

According to the application.

Description:

Golgi transmembrane glycoprotein 73 (GP73) is an ideal serum marker for the early diagnosis of liver cancer and the evaluation of postoperative recurrence. The sensitivity and specificity of GP73 are much higher than that of ALPHA-fetoprotein (AFP), which was developed 40 years ago. The combined detection of GP73 and GOLgi transmembrane glycoprotein 73 will greatly improve the diagnosis and treatment of liver cancer.

Note:

This material is offered by Gene Universal for research, laboratory or further evaluation purposes. Not for human use. Made in China.
